

Sphero Challenge Three

Start by pairing your Sphero with an iPad by going into the Sphero Edu app and pairing.

Open the app and start a new project.

Challenge Three

Write code that makes the Sphero travel in a square shape. After you've done that, see if you can get it to travel in a rectangle. Also, experiment with changing colour. See if you can have your Sphero change colour each time it changes direction.

Done that? Great! Try a triangle, a diamond and a star.

If you can do those, try a circle!

Once you can do a circle, try a figure eight.
